Education

Manipal University Jaipur

Aug. 2023 – Jul. 2027

B.Tech in Computer Science (Data Science) | CGPA: 8.1/10.0

Jaipur, India

Relevant Coursework

- Data Structures & Algorithms
- Database Management Systems
- Machine Learning
- Operating Systems
- Object-Oriented Programming
- Deep Learning

Experience

The Hera Cubra Group

Jun. 2026 – Present

Software Engineering Intern

Remote

- Built an automated email outreach system for a client to send targeted mail at scale, driving lead generation that contributed to \$40K in profit within one month.
- Developed a localized website generation platform that created preview sites for nearby businesses, reducing client acquisition and hosting costs by 30% while improving partner business sales by 5–10%; for our own business, generated \$2K in sales and delivered 9 qualified leads with consistent client service.

ThinkCraftLabs

Aug. 2025 – Nov. 2025

Full Stack Developer Intern

Remote

- Built a full-stack 3D design and manufacturing platform with a 51-product e-commerce catalog across 3 categories and an in-browser 3D model viewer for STL/GLB files.
- Deployed on Vercel, Render, and MongoDB Atlas with REST APIs covering authentication, orders, events, and admin workflows for production-ready scalability.

Projects

ResumeBuild | AI Job Application Platform — Python, FastAPI, Next.js, PostgreSQL, FAISS, OpenAI

[GitHub](#)

- Built an AI-powered job application prototype that parses resume PDFs into structured JSON, stores candidate embeddings in FAISS, scrapes RemoteOK/Greenhouse jobs into PostgreSQL, and scores matches with a multi-signal engine ($\geq 75\%$ threshold).
- Implemented ATS score estimation, hallucination-free resume personalization, HTML-to-PDF generation with Playwright, and application tracking with analytics APIs via a FastAPI backend and Next.js frontend.

BlitzDutch | Multiplayer Card Gaming — React, TypeScript, Node.js, WebSockets

[GitHub](#)

- Built a real-time multiplayer Dutch card game using React, TypeScript, Node.js, and WebSockets with synchronized gameplay and server-side state management.
- Designed a responsive UI featuring hidden-hand mechanics and card-swapping gameplay for seamless online multiplayer interactions.

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, C++, SQL

Web & Backend: React, TypeScript, Vite, Tailwind CSS, Node.js, Express.js, REST APIs, WebSockets, HTML5, CSS3

Databases: MongoDB, MySQL, Schema Design, Query Optimization, Indexing, Normalization

Cloud & DevOps: AWS, GCP, Docker, CI/CD, Vercel, Render, Netlify, MongoDB Atlas, Git, GitHub

System Design: RESTful Architecture, Microservices, API Design, Caching, Distributed Systems

Tools: Generative AI, Automation Engineering, Power BI, Pandas, NumPy

Patents

Vertically Integrated Data Center System with AI-Based Cooling

Patent No. 202511056772

Inventor

- Invented an advanced data center cooling system combining AI-driven thermal management with Phase Change Material (PCM) immersion cooling.
- Optimized energy efficiency by up to 40% while supporting high-density computing workloads through predictive temperature control.
